

Webinar:

"Fire and Forest Dynamics in Northern Boreal Forests"

Presenter: Jill Johnstone

Assistant Professor, University of Saskatchewan
Research Associate, University of Alaska Fairbanks

Current changes in climate are likely to cause changes to the fire regime in Alaska and other boreal regions. How are projected changes in fire regime likely to affect the composition of boreal forests? This presentation summarizes research in interior Alaska and adjacent Yukon Territory that examines how changes in fire severity and frequency may shape future forest dynamics.
